SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance entitled "Class II Special Controls Guidance Document: Intraoral Devices for Snoring and/or Obstructive Sleep Apnea; Draft Guidance for Industry and FDA." Intraoral devices to treat snoring are removable medical devices that are fitted in the patient's mouth to reduce or eliminate snoring. In some cases the devices may also be used to treat obstructive sleep apnea. Currently, intraoral devices for snoring and/or sleep apnea are unclassified. FDA is proposing to classify these devices into class II. FDA intends that the draft guidance document, if finalized, will serve as the special control for intraoral devices for snoring and/or obstructive sleep apnea. The draft guidance document offers recommendations to the regulated industry and FDA staff about the content and format of a premarket notification submission (510(k)) for such devices in order to establish safety and effectiveness. The draft guidance document is intended to facilitate the assembly of necessary data, maintain consistency of reviews, and provide for a more efficient regulatory process.

II. Significance of Guidance

The draft guidance represents the agency's current thinking on intraoral devices for snoring and obstructive sleep apnea. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the applicable statutes and regulations.

The draft guidance document is being issued consistent with FDA's good guidance practices (GGPs) regulation (21 CFR 10.115). The draft guidance document is issued as a level 1 guidance in accordance with the GGP regulations.
